

# ID Verification & Form Completion Made Simple

With Acuant's trusted ID verification and form filling software on Aila's iPad-based Interactive Kiosk, enterprises can deploy fast, accurate and secure customer registration and verification workflows. These user-friendly, scan-based solutions eliminate manual errors, improve customer experiences, and save time and money.

Aila's TrueScan technology on the Interactive Kiosk adds powerful scanning capabilities to the native camera on an iPad, such as white-light illumination, a precision red-dot aimer, and learning algorithms, ensuring seamless 1D/2D barcode and ID scanning in any lighting environment.

## ID VERIFICATION

Acuant's **AssureID** software provides fast and secure ID verification for customers or associates. Using the industry's largest database library and unparalleled document forensic tests, AssureID is the most effective solution to prevent identity theft and fraud.

With Aila's **Interactive Kiosk** and **TrueScan** technology users can scan a document such as a driver's license or a passport to begin ID verification. The touchscreen interface guides the user through the process, and an optional ID tray attachment makes it easy to capture perfect scans and images.

## INTELLIGENT DATA CAPTURE & AUTO-FILL

Acuant's **AcuFill** software enables users to quickly and accurately capture all forms of government ID or identity document and upload that information directly into a CRM or database, automating the form-filling process with greater accuracy and efficiency.

With the TrueScan technology on Aila's Interactive Kiosk, ID scanning, verification and auto-form filling are made easy.
